

נושא לפינוק CPP מערכת השוואת אתרי חדשות

מגישים: עוז יוסף יוחאי (213263262), עמית רביב (207971060).

This UML describes a **news analysis system** whose goal is to compare how different media sources cover the same stories and topics.

The system tracks:

- * articles
- * reporters
- * channels and networks
- * public figures
- * stories/topics
- * external information sources

and connects them together to analyze:

- * bias

- * credibility
- * coverage differences
- * public reactions

Main Idea

A **Story** represents a real-world event.

Different:

- * Articles
- * Channels
- * Reporters
- * Sources

cover the same story in different ways.

The system compares those differences.

Core Flow

Example:

Tweet about election
↓
Reporter writes Article
↓
Channel publishes it
↓
Article belongs to Story
↓
Story belongs to Topic

Purpose of Each Main Class

Article

Represents a news article.

Stores:

- * bias
- * credibility
- * language
- * summary

Used for:

- * comparing coverage
- * analyzing perspectives

InformationSource

Raw information used by reporters.

Examples:

- * Tweet
- * Clip

Purpose:

- * provide evidence
- * support articles
- * compare reliability

Reporter

A journalist or news writer.

Purpose:

- * investigate stories
- * write articles
- * compare sources

Channel

A media outlet/channel.

Examples:

- * CNN
- * Fox News
- * ESPN

Purpose:

- * publish articles
- * represent editorial direction

Network

A company that owns channels.

Purpose:

- * manage reporters/channels
- * compare network-wide bias

Story

A specific real-world event.

Examples:

- * Election debate
- * Football final
- * Celebrity scandal

Purpose:

- * connect all coverage of the same event

Topic

A broader category.

Examples:

- * Politics
- * Sports
- * Entertainment

Purpose:

- * group related stories together

PublicFigure

A person discussed in media.

Examples:

- * politician
- * celebrity

Purpose:

- * track media mentions
- * compare public/media reactions

Inheritance Differences

- Tweet

Short social-media information.

Focus:

- * trends
- * reactions
- * engagement

- Clip

Video/media evidence.

Focus:

- * transcripts
- * visual information

- Politician

Political public figure.

Adds:

- * ideology
- * party

- Celebrity

Entertainment/media figure.

Adds:

- * followers
- * industry

- CelebrityPolitician

Hybrid type.

Represents:

- * celebrities who become politicians

Example:

- * actor turned president

System Facade

`NewsSystemFacade` is the main controller.

Purpose:

- * simplify the system
- * provide one entry point
- * coordinate all components

Instead of interacting with every class directly, the application talks to the facade.
